

WHAT DID YOU SAY, SWEETIE?

Developing speech and language skills is a difficult task. It is natural for young children to make mistakes in the process of learning to speak. Most children eventually drop errors in their speech and develop normal speech patterns. Some children continue to make errors beyond the age when other children have mastered those sounds.

It may be time to show concern if you observe one or more of the following:

1. Family members or friends have a hard time understanding your child.
2. A child demonstrates frustration because you don't understand his/ her speech.
3. Your child shows no signs of frustration when trying to communicate, but you do not understand his/her speech.

The chart below gives general guidelines of sound mastery. The guidelines allow for the different developmental speech milestones that children experience.

90% of Children Have Mastered These Sounds...By Age

p, d, m, w, h, n	2 years old
t, b, k, g	3 years old
f, v, y	4 to 5 years old
s, z, j, l, r, sh, ch, th, blends	5 to 7 years old

If you have concerns about your child's speech and language, free help is available. Children ages 0-3 can receive free evaluations through Alabama Early Intervention (1-800-543-3098) and free services if they qualify. Children ages 3+ can also receive free evaluations and services (if they qualify) through their local school system. ✨
